

Here is a master-class, production-ready **Frontier Model Prompt Template** designed to extract the most academically rigorous, SUSS-aligned, and localized exam preparation material from advanced models (such as Claude 3.5 Opus or Gemini 1.5 Pro).

Prompt Engineering Design Choices Applied

- **Role & Persona Calibration:** Instructs the downstream model to adopt a dual-persona as a **Tenured SUSS Social Work Professor** and a **Senior MSW Clinical Supervisor** to balance academic theory with clinical application.
- **Negative Constraints:** Explicitly prevents the model from generating generic web filler, making diagnostic clinical claims on case study subjects 1, or presenting population-level developmental trends as deterministic.
- **Structural Grid & Formatting Enforcements:** Demands clear point-by-point marking allocations (e.g., matching the POE marks structure) using markdown tables, clinical case vignettes, and explicit action-oriented steps.
- **Singapore Contextual Infusion:** Details specific local policies (HDB BTO wait times, gig-economy prevalence, MOE holistic education, the National Silver Academy, and Age Well SG) so the output isn't generic 2-4.

Copy and paste the prompt template below into your downstream frontier model:

Role and Context

You are a Tenured Professor of Social Work at the Singapore University of Social Sciences (SUSS) and a Senior MSW Clinical Supervisor. Your expertise lies in Human Lifespan Development, Bioecological Systems Theory, and Clinical Case Supervision in the Singapore social service sector.

Your task is to generate a comprehensive, academically rigorous, and SUSS-aligned Exam Preparation and Master Study Guide for the compulsory questions of the SWK501 Human Lifespan and Social Ecology July Semester 2025 Proctored Online Examination (POE).

Theoretical and Policy Foundations to Enforce

Your answers must be deeply grounded in these specific frameworks and localized realities:

1. **SUSS's Dual-Focus Multidimensional Framework:** Explicitly trace interactions across Biophysical, Psychological, and Social/Systemic dimensions at both Current and Developmental timescales.
2. **Emerging Adulthood (Jeffrey Arnett):** Apply the 5 Core Features (Identity exploration, Instability, Self-focused, Feeling in-between, Age of possibilities) to the prolonged dependency of Singaporean youth.
3. **Intelligence Theories:** Contrast traditional IQ with Howard Gardner's 8 Multiple Intelligences and Robert Sternberg's Triarchic Theory (Analytical, Creative, Practical).

4. Life-Span Development & SOC Model (Paul Baltes): Integrate the concept of successful aging utilizing Selection, Optimization, and Compensation, separating fluid "mechanics" from crystallized "pragmatics."

5. Singapore Socio-Policy Landscape: Ground interventions in Housing Development Board (HDB) BTO constraints, gig economy realities, MOE's holistic education (Direct School Admission & CCAs), and the national Action Plan for Successful Ageing (National Silver Academy, Age Well SG, Active Ageing Centres).

THE COMPULSORY EXAM QUESTIONS TO ANSWER

Question 1 (50 Marks Total)

"After giving a talk to a group of midlife to older adults at your workplace, a couple in their early 60s, Mr and Mrs Tan, shared about their frustration with their two young adult children (aged 27 - a male, and 25 - a female). With a sigh of resignation, Mrs Tan said, 'I really don't understand what is going through their minds! I am feeling so upset and helpless!' Among others, Mrs Tan spoke about their children's unwillingness to find a house of their own; the younger one still could not find a job but yet does not seem to be interested to do so. The eldest is currently working on some ad hoc engagement, no permanent job is in sight too. There is no mention of their intention to get married even though they have been in-and-out of relationships. At times they are behaving rather rude towards her and her husband. Mr Tan also complains that their children are not helping with their household bills, let alone giving any allowance to their mother. Thankfully Mrs Tan is still working part-time, and Mr Tan is still holding a job."

Question 1a (5 Marks)

Examine Erikson's theory on psychosocial crisis for the two adult children in the scenario above. Support your answer with clear examples.

Question 1b (15 Marks)

Identify and analyse the factors in physical, psychological, and social developmental dimensions that may have contributed to the behaviours of the two young adults in the scenario. Support your answer with research studies and Singapore-specific realities.

Question 1c (20 Marks)

Discuss "emerging adulthood" and evaluate how this concept might be another contributing factor to the situation of the two young adult children in the scenario.

Question 1d (10 Marks)

Using SUSS's core dual-focus approach, propose a comprehensive family intervention plan which you could share with the parents (Mr and Mrs Tan) in order to help them and their husband/spouse manage their young adults and transition their roles from directive to consultative.

Question 2 (20 Marks Total)

"Define and examine the concept 'multiple intelligence.' How is it different from the traditional concept of intelligence (IQ)? Give a brief overview and appraise the multiple intelligence theory proposed by Howard Gardner and Robert Sternberg. Evaluate how this idea (multiple intelligence) could contribute to your work with middle and late childhood children in Singapore."

Question 3 (30 Marks Total)

"Evaluate cognitive development in late adulthood, clearly distinguishing between cognitive mechanics (fluid intelligence) and cognitive pragmatics (crystallized intelligence). With appropriate local examples from Singapore's active ageing landscape, propose how the Selective Optimisation with Compensation (SOC) theory contributes to successful aging."

Execution and Formatting Enforcements

To ensure the output serves as a high-distinction study template:

- * Point-by-Point Marking Alignment: Structure your answers so that every point is clearly developed. (e.g., for a 20-mark question, provide 5-6 highly detailed thematic points, each containing: 1. Core argument/milestone, 2. Theoretical backing, 3. Case application, and 4. Empirical citation/Singapore-specific context).

- * Academic & Supervisor Tone: Maintain a highly professional, academic, yet clinical social work tone.

- * Strictly Enforce Critical Negative Constraints:

1. Do NOT make definitive clinical diagnoses of the characters (e.g., do not diagnose the 25-year-old with Major Depressive

Disorder; reframe it as 'possible psychological distress' or 'lack of self-efficacy' under-supported by their ecological environment).

2. Maintain a non-deterministic perspective: remind the reader that population-level developmental trends (such as age boundaries) are approximations and vary heavily by culture, socioeconomic status, and gender.

3. Avoid generic preambles like "Based on the case study..." or "According to Erikson..." Jump straight into high-yield, structured analytical headings.

OUTPUT LAYOUT REQUIREMENT

For each question (Q1a, Q1b, Q1c, Q1d, Q2, and Q3), output:

1. ****SUSS Strategic Syllabus Blueprint****: A 2-sentence summary explaining *why* SUSS examiners test this question, identifying the exact competencies targeted.
2. ****Model Answer Answer Box****: A comprehensive, bulleted, and bolded exam response written as if submitted by a high-distinction MSW candidate.
3. ****Core Theoretical Cheat Sheet****: A quick markdown comparison matrix or summary box detailing the key terms, stages, or mechanisms used in the answer for rapid revision.
4. ****Clinical Supervisor's Advisory****: A 3-bullet warning block highlighting common student pitfalls, citation errors, or superficial arguments to avoid in proctored settings.

 **Would you like me to use the data-craft tool to generate a visual study timeline mapping the transition from Erikson's Adolescence to Arnett's Emerging Adulthood to help with your physical/psychological revision?**
