

NTUC Health - Active Ageing Centre Community Screener

Version 1.0

For the Well Seniors, we perform outreach, engage and triage via Community Screener (CS)

Playbook include components of key function in AAC. Components are for reference only. not sequential.
 Example: Administering CS form for our registered seniors can be at any stage as long as he/she is ready; Engagement can apply to New Seniors.

Community Screening (CS)

Objective

We do Community Screening (CS) to

Proactively identify seniors who are presently and potentially at risk of Health and Social vulnerabilities

We hope to achieve these objectives

- Maximizing functional capacity to enhance level of independence
- Timely intervention to address health and social problem
- Provide social support to vulnerable seniors
- Monitor and track seniors general well-being over time
- Ensure seamless information and referrals

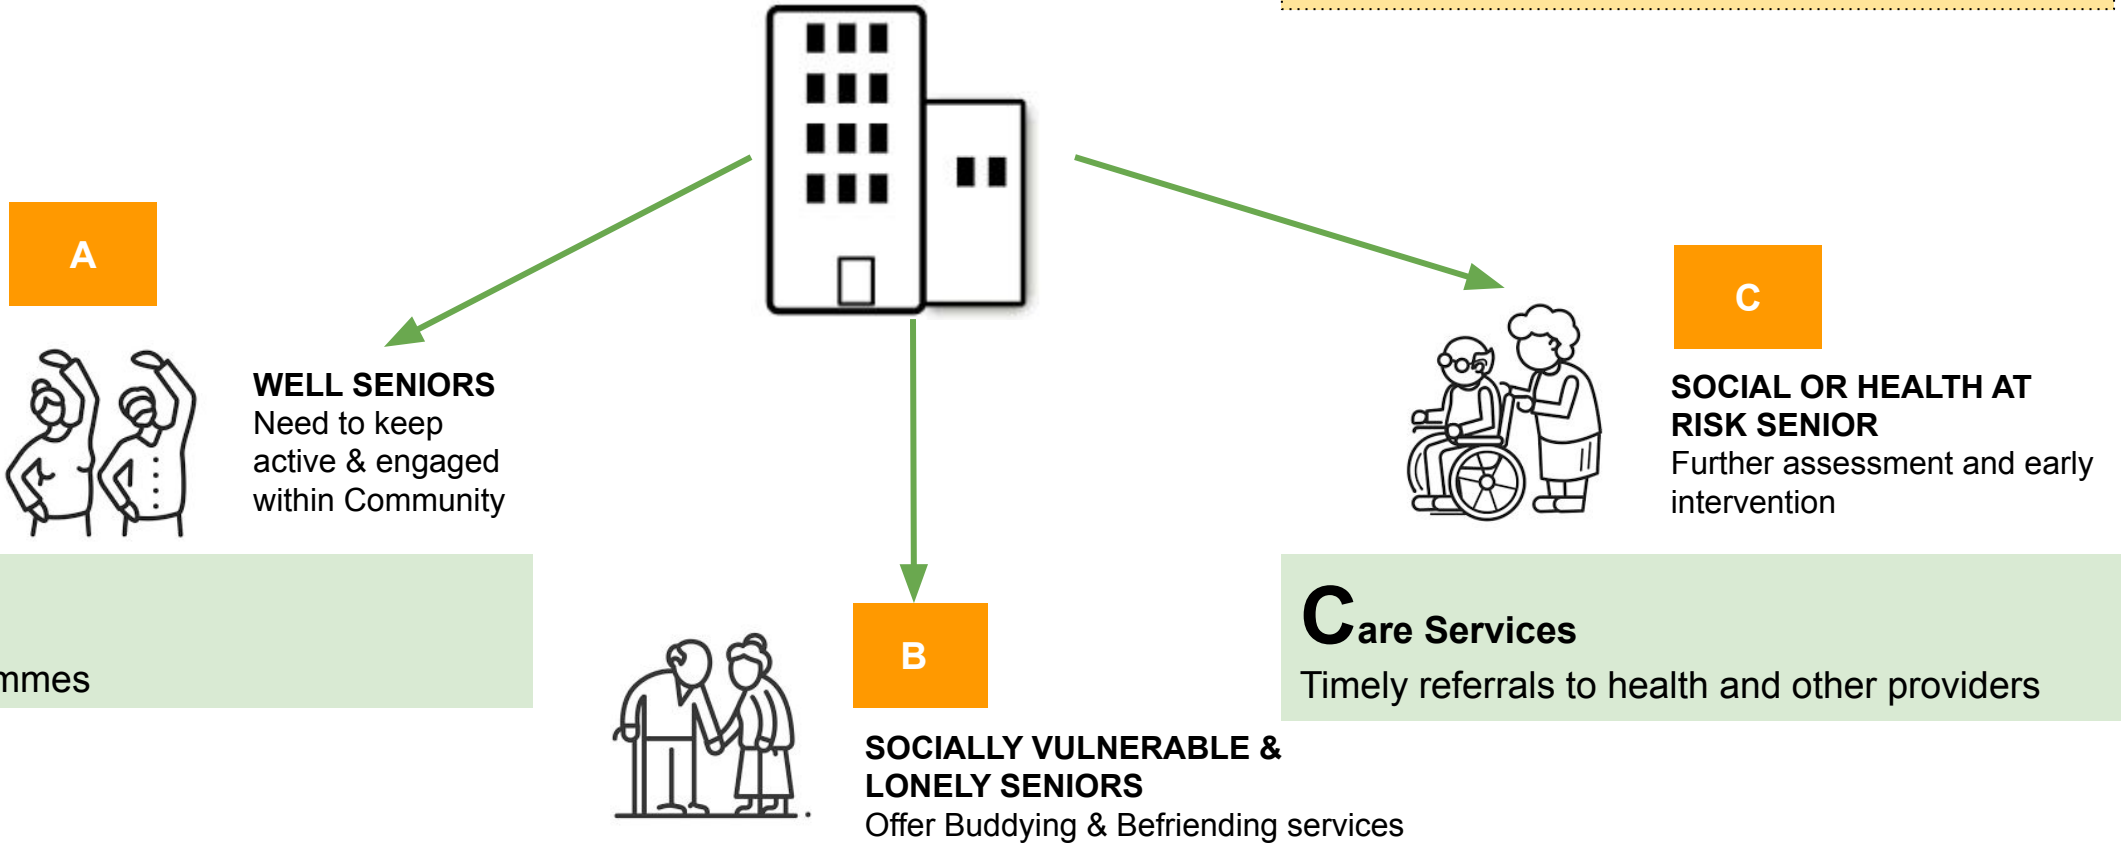

This section provides guidelines to perform CS and cannot be taken as the training to administer CS. This should be read in addition to the official training provided by AIC.

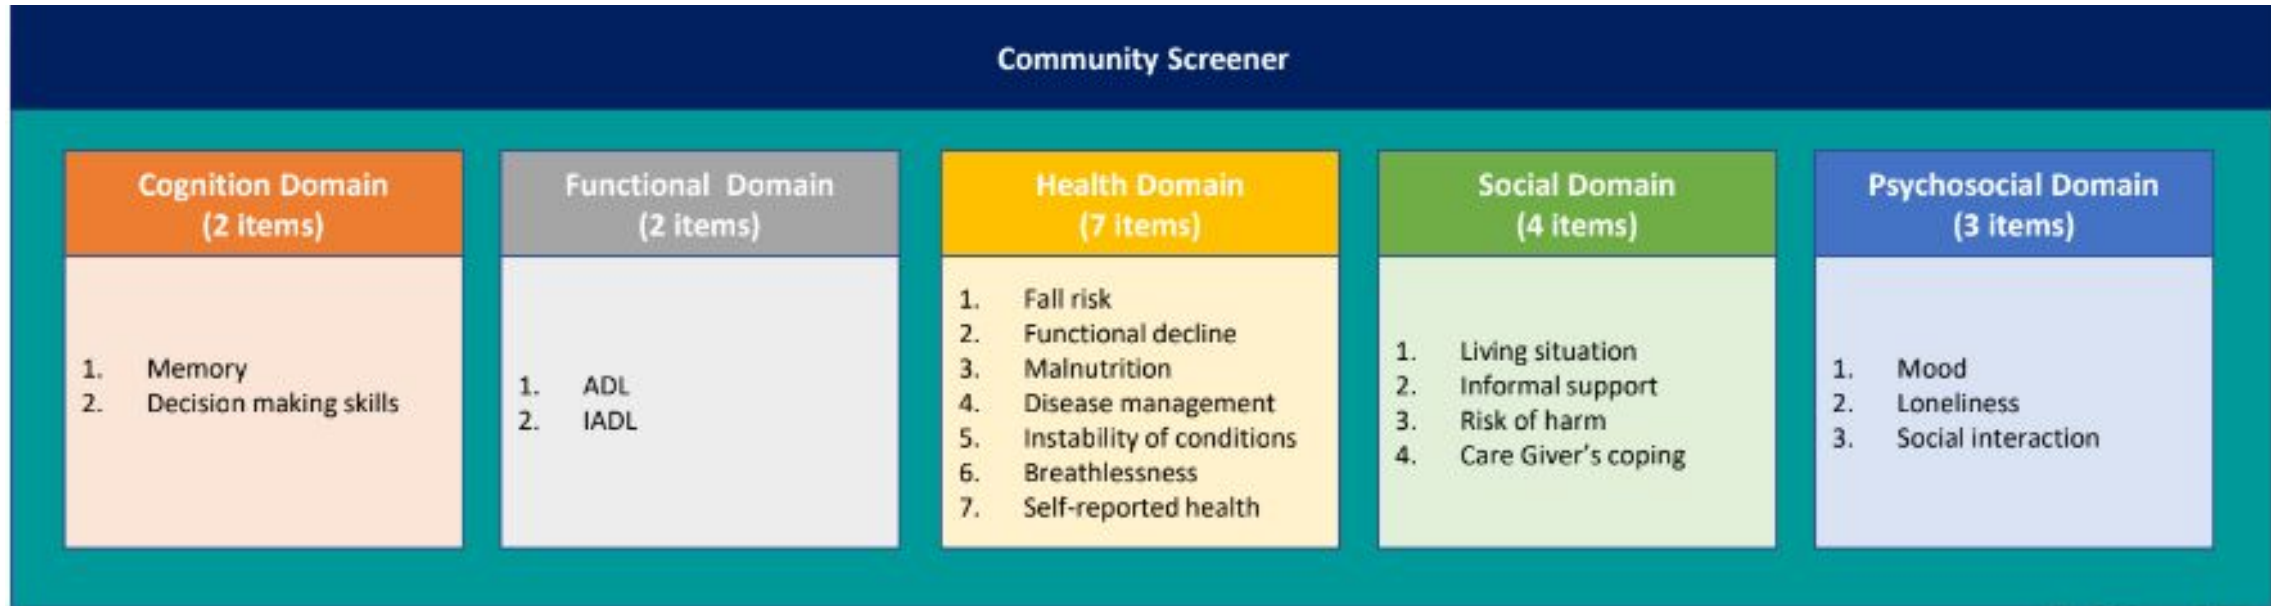

Outcome of CS

CS is an **Assessment** and not a survey
It is administered to **determine care provision** required by the senior

Note: The administration of CS must be conducted by a trained personnel

18 Questions in 5 Domains

1

InterRAI Assessment Urgency Algorithm (AUA) (7 questions)

Seniors who

- Has ADLs or Cognitive issues
- needs comprehensive assessment and urgency of assessment

2

Bio-Psycho-Social (BPS) problems (11 questions)

Seniors who has existing BPS condition:

- **Biological:** Physical Health, Disability,
- **Psychological:** Thoughts, emotions, behaviour, belief system, coping skill
- **Social:** Work issues, family circumstances, financials

Make it comfortable for the seniors

Most commonly, CS is conducted at AAC

- Private room if possible else a quiet corner where you will not be disturbed
- Best to have senior seated facing away from the door/open space to prevent distraction
- Have a casual chat with senior before starting properly

CS can also be conducted at

- senior's home or
- other locations (e.g. right after participating in an activity)

Try not to:

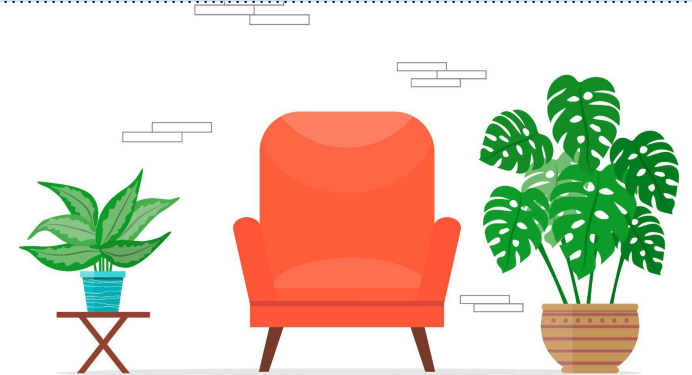

- Conduct CS while standing as it takes a while and may be uncomfortable for both you and the senior. Find a place to sit.
- Continue if you sensed that Senior is getting agitated or emotional. Stay with the senior for a while and asked if you can continue or wait another day.

Note: CS need not be completed in one sitting

TIP: Notify colleagues that you will be conducting CS so that they will help fend off any disturbance during the time

TIP: Typically it takes about 15-20 min, so do make sure you block enough time. Don't rush the process.

TIP: CS can be done in a physical form or directly input into AcuteNet.

Preparing the seniors

Before you start, explain

- **why** we are doing CS and **how often** we will be conducting CS
- Expected **duration** of the session (approx. 15-20 min)
- the **benefits** of CS and what may come out of it
- that some questions **may be uncomfortable** but it is important to help us assess the condition
- that information will be **kept confidential** except for the purpose of care provision (sharing result with AIC)

Note: If senior decline to do CS, there's no need to insist or convince the senior to complete the CS. It is seniors' choice and we respect the decision made by them. Let's try again next time.

Why do we do CS?

Through CS, we help identify seniors with health and social needs. Referrals for further assessment and assistance if required and we will also suggest activities to improve your quality of life.

Benefits

- Optimise your current function (preventive health)
- Improve quality of life
- Live well and safe in the community
- Refer to other applicable services, if needed, depending on the unique needs of the senior
(Social/Lifestyle/Befriending/Buddying)

Before conducting CS, make sure that seniors have **REGISTERED** with us and you **MUST** seek consent for the disclosure to relevant agencies/service providers

Explain this to client before you proceed with the assessment.

“Client/family has consented to this assessment and to the disclosure of enclosed information to relevant agencies/service providers to facilitate service application, improve health care services by carrying out evaluation, planning and statistical analysis and assist in any other reasonable purpose related to the aforesaid.”

Note: For the administration of CS, please refer to the CS training deck by AIC.

Note: For fields that you did not manage to fill in, pls verify with senior and not assume the senior's response.

Completing the CS Assessment

Please remember to fill in

1 Name of assessor

Please ensure that the assessor (who conduct the CS with senior) has gone through the CS training by AIC

2 Signature assessor

Please sign off on the CS Assessment form.

3 Date of Assessment signed as complete

The date that you have completed the CS with the senior.
If it takes more than 1 round, it will be the last date where CS is completed .
It is **not** the date that you key into the ACUNET system.

TIP: Do check when you transfer the data from physical copy into AcuteNet system before you submit to minimise the error.

How often do you do CS?

These are the common situations to conduct CS:

- New enrolment
- Expiring of CS validity
- Discharged from hospital recently
- Recent change in health or social condition

Common challenges in administering CS

Sometimes, the response we get from seniors may not be fully representative of the actual condition/situations.

Let's get curious and be a keen observer.

Example:

In situations where seniors mentioned they have limited social interaction, you may probe further. Some questions you may ask include:

Are you still working? What do you work as?

Do you cook yourself or buy?

Where do you buy your groceries/buy your meals from?

**Look and hear
beyond the words
What could
they really mean?**

Let's share experiences and feedback to improve

If you

- See areas to improve in any of the CS process (i.e. interview, sequencing of questions, data entry)
- Experience pain points in administering CS (e.g. too lengthy, cumbersome to record)
- Ideas to improve the process,

Please speak to your supervisor so that we can then collectively influence and facilitate learnings to make changes and improve the processes.

INFLUENCE

For a better process

- To review the administration of CS and influence to effect the changes for AAC

LEARN

Staff from other AAC

- Share with other centres your experience (good and bad) and seek out ideas to overcome these problems

Thank You!
